

Hello,

I'm Ali Nasser, a U.S. citizen and iOS developer specializing in SwiftUI, application security, and performance optimization.

I've built several production-grade apps — including Secure Vault (AES-256 encrypted password manager), Blue Trading (macOS financial analysis tool), and Syrian Beauty (Firebase-based management system).

I'm passionate about building secure, scalable, and user-friendly iOS applications that align with Ford's vision for connected, intelligent mobility.

I'd be honored to contribute to FordPass by applying my expertise in Swift, SwiftUI, CI/CD automation, and security-driven architecture.

Thank you for your time and consideration.

— Ali Nasser
